

## 250 PSI DRY BARREL FIRE HYDRANTS, FLANGED OR MECHANICAL JOINT ENDS

**MODEL: SFL-DBH-250-F or SFL-DBH-250-MJ**

### GENERAL DESCRIPTION

Sanflo Dry Barrel Hydrants provide a connection point for firefighters to tap into a water supply. When the hydrant is not in use, water is drained (or can be pumped) from the barrel. A main valve located in the base allows for the hydrant to be pressurized or drained. Upon opening the main valve, the barrel is pressurized. Upon closing the main valve, the barrel is drained. Sanflo hydrants can be installed in any environment, but are especially useful in freezing conditions.

**BASE SIZE:** 5 1/4"    **HOSE OUTLETS:** 2 1/2"    **PUMPER OUTLET:** 4 1/2"

### KEY TECHNICAL FEATURES

Conforms to: ANSI / AWWA C502 standard	Max working pressure: 250PSI (17 bar), test pressure of 500PSI (34 bar) PER UL246 and FM1510
Approvals: UL & FM	360° nozzle rotation with dual bronze drain way
Flanged ends are ANSI B16.2, class 150 Mech joint ends are ANSI / AWWA C153/A21.53	Min/max working temperature: 33°F to 126°F (0.6°C to 52°C)
Designed to prevent damage to main valve if hit accidentally	Coating: fusion bonded epoxy interior And exterior conforming to AWWA c550
Very efficient hydraulic design provides optimum performance and maximum flow	Field replaceable nozzles; easily removable main valve

### CARE AND MAINTENANCE

No regular maintenance is required, however it is advisable to annually inspect and verify proper operation. The frequency of testing, inspections, and/or maintenance is the sole responsibility of the end user. Only qualified fire protection integrators should perform any required maintenance involving the valve.

### ORDERING INFORMATION

Specify model **SFL-DBH-250-F** or **SFL-DBH-250-MJ**, and include desired bury depth as seen on chart.
